

I ask that the commission deny this petition. I live near the Walt Disney World Resort complex and have to drive by on an almost daily basis. There is already a high level of FRS usage in this location. I use the frequencies that the European FRS units use for simplex communication and have already encountered occasional interference from illegal use of these units in that area. However, if these frequencies would be formally legalized for use in the US, more radio makers would begin to include these channels in domestic FRS radios and this frequency would become totally useless to amateur radio operations in the Orlando, Fl area. The same would most likely occur in other heavy tourist areas. I urge that this petition be denied.
